

Overview

SmartWAN Portal

The SmartWAN Portal provides a centralized, real-time interface for comprehensive security monitoring and management across hybrid IT environments. Designed to integrate on-premises and cloud-based security data, the dashboard offers a unified view of an organization’s security posture, enabling proactive threat detection, alert management, and streamlined compliance tracking.

The portal offers a variety of dashboards, including the **Agency Dashboard**, **Event Dashboard**, and **Threat Scoring Dashboard**, each tailored to specific monitoring needs. Upon accessing the SmartWAN Portal, users are directed to the default **Agency Dashboard**, which provides visualized status information on network and security events for agencies with installed SmartWAN Customer Premises Equipment (CPE). Additional features, such as user authentication, event lists, and detailed agency monitoring, empower users to manage incidents effectively and maintain operational security.
